

C++ Programming – Table of Contents

1. Foundations & Compilation

- Basic Data Types and Variable Types
- Variable Scope and Storage Classes
- Constants and Literals
- Type Qualifiers
- The Compilation Process (Preprocessing, Compiling, Assembling, Linking)
- Header File Creation and Include Guards
- Basic Input and Output with Streams
- Operators
- Decision Making and Loop Types

2. Data Structures & Memory Management

- Arrays and Strings
- Pointers and References
- Function Pointers
- Structures and Pointers to Structures
- typedef
- Dynamic Memory Functions
- new and delete Operators
- Memory Allocation for Arrays and Objects

3. Object-Oriented Programming (OOP)

- Creation of Classes and Objects
- Access Specifiers (public, private, protected)
- Data Members and Member Functions
- this Pointer
- Constructors and Destructors
- Static Class Members
- Friend Class and Friend Functions
- Data Abstraction and Encapsulation

4. Inheritance & Polymorphism

- Base and Derived Classes
- Access Control and Inheritance
- Constructing and Destroying Derived Classes
- Types of Inheritance (Multiple, Multilevel, etc.)
- Function Overloading and Operator Overloading
- Virtual Functions and Pure Virtual Functions
- Abstract Classes (Interfaces)
- Compile-Time vs. Run-Time Polymorphism

5. Preprocessor & Namespaces

- `#define` Directive and Macros
- Predefined C++ Macros
- Defining Namespaces
- `using` Directive
- Nested Namespaces
